Board games were very popular with families during the Victorian Era.

Old Toys

New Toys

The best-selling toy of all time is the Rubik's Cube! More than 350 million of the colourful cubes have been sold since 1980.

Fabulous Facts:

Differences between old toys and new toys:

Materials:

Old toys were usually made from wood, glass, porcelain and types of metal called tin and lead. New toys are usually made from plastic, foam, rubber and a type of fabric called nylon.

Technology:

Old toys only ran by a wind-up mechanism called clockwork. New toys have batteries, electronic speakers, screens and some can access the Internet.

Manufacture:

Old toys were mostly manmade. This meant that they took a long time and cost a lot of money to make. It also meant that fewer toys could be made. New toys are mass produced by machines in factories. Lots of new toys are made from plastic. Plastic is much cheaper to use. It can be melted and poured into moulds so lots of toys can be made at the same time. This makes the toys much quicker to make too.

Safety:

Old toys could have sharp edges and were often made from unsafe materials. All new toys have to follow strict rules to make sure they are very safe.
